

# NS7000 Two Pocket Bank Note Counter

- Touchscreen LCD display
- Fast reliable counting and sorting
- Detects note values; no need to presort
- Counterfeit detection (UV/FL/MG/MT/IR)
- Compact size
- USB interface for updates
- Easy cleaning and maintenance
- Counts up to 1,500 notes per minute
- Hopper capacity: 500 notes
- Stacker capacity: 200 notes
- Reject capacity: 50 notes
- 281mm 266mm 304mm HxWxD

The NS7000 is a fast, reliable two pocket banknote counter. Notes can be sorted and counted quickly and easily thanks to its state of the art note recognition technology. Reject notes such as those of a different currency, damaged notes, or otherwise unidentifiable currency are sent to the upper pocket so there's no need to check for these before counting.

For the utmost convenience, the NS7000 offers a mixed value count mode, meaning it automatically identifies notes of different denominations as they pass through, so all values of notes can be counted together. Other operation modes include orientation sorting and basic piece counting.

The NS7000 includes the latest counterfeit detection capabilities. Notes can be checked for UV, Florescent, Magnetic and Infra Red security features. Potentially counterfeit notes are sent to the reject pocket.

With a hopper capacity of 500 notes, the NS7000 is perfect for any business. The unit is designed to run as quietly as possible and has a relatively compact footprint that won't occupy too much counter space. A built-in handle makes it easy to transport, while the rear panel is easily removed for cleaning and maintenance.

For future-proofing, USB and RS232 sockets provide the means to update the NS7000 to recognise new bank notes.
